Author's Guidelines
(as provided by OASIcs)

1 Introduction

The present guidelines are binding for the preparation of reproducible manuscripts for the *Open Access Series in Informatics* (OASIcs). They serve to ensure a uniform and acceptable appearance of the series.

2 OASIcs LaTeX style

Authors have to use a dedicated OASIcs LaTeX style to produce the final version of their papers. The style file provides several features for authors:

- titlepage environment,

- abstract environment,

- provision of ACM 1998 classification environment,

- topical keywords,

- volume frontmatter template.

- The OASIcs LaTeX style templates for authors are available at:
  http://drops.dagstuhl.de/styles/oasics/oasics-authors.tgz

3 Author's instructions

- Use pdflatex.

- Use further LaTeX packages only if required.

- Do not use a different main font. For example, usage of times-package is forbidden.

- Provide full author names (especially with regard to the first name).

- Fill out the \subjclass and \keywords macros. For the \subjclass, please refer to the ACM classification at
  http://www.acm.org/about/class/ccs98-html.

- Take care of suitable linebreaks and pagebreaks. No overfull \hboxes should occur in the warnings log.

- Provide suitable graphics of at least 300dpi (preferrably in pdf format).

- Use the provided sectioning macros: `\section`, `\subsection`, `\subsection*`, `\paragraph`, ...

- Keep the standard style (`plain`) for the bibliography as provided by the `oasics.cls` style file.

- Use a spellchecker to get rid of typos.

- A manual for the LIPIcs style is available at `http://drops.dagstuhl.de/styles/oasics/oasics-authors/oasics-manual.pdf`.
